

Saskatchewan Breeding Bird Atlas - A Public-Private Partnership for Conservation *(Year 1 of a 2 year project)*

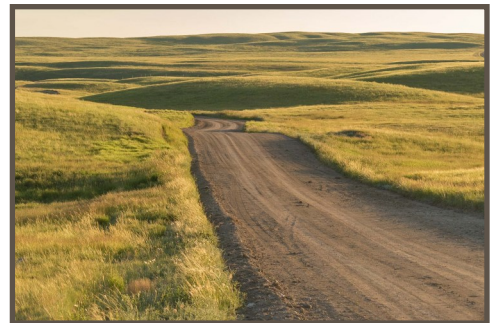

Bird Studies Canada
\$25,000 Grant

A Breeding Bird Atlas is a scientifically-designed project to assess the status, distribution, and abundance of all breeding bird species within a defined area. Atlas data support sound environmental decisions by both the industrial sector and conservation organizations; Atlas data are put to work to make better-informed decisions that minimize impacts to biodiversity.

Project Achievements:

- 350 Atlas participants were engaged in the project.
- 1490 atlas squares reporting sampling were completed.
- 27,000 observations of 263 species were made.
- 4,868 point counts completed.

Taking Action for Prairie Program

Prairie Conservation Action Plan
\$3,000 Grant

Taking Action For Prairie Program aims to increase awareness and appreciation of the native prairie and wetland ecosystem and its conservation through the development and implementation of an Action Plan by youth students after program delivery.

Project Achievements:

- Increased awareness and appreciation of the native prairie and wetland ecosystem conservation in 106 grade 6 and 8 students.
- Students developed action plans, which included campaigns for reducing water consumption, raising awareness about the impact of invasive species, and raising awareness on the importance of conserving native prairies and wetlands for species at risks.
